

International Construction Project Management

Glasgow Caledonian University

Content

The MSc International Construction Project Management course aims to equip you with the skills necessary to manage construction projects, both in the UK and overseas. This means that you'll have the opportunity to develop the abilities, frame of reference and, critically, a common understanding of the construction project management 'language' to work more effectively with international clients and organisations.

The course has proven to be popular with international students and the intake has continued to grow in recent years. It is further anticipated that the enhanced project management skills on offer will prove popular with industry as CPD. These core skills remain significant components with the professional membership criteria of the course's accreditation bodies, namely CIOB, RICS, APM.
