

Aquatic Veterinary Studies

University of Stirling

Venues

Stirling Campus

Content

Food from aquatic systems is essential for much of the world's population. However, with wild catches of seafood declining in many places, aquaculture is playing an increasing role as an alternative source of high-quality, nutritious food - and as an employer. Controlling disease is important to the ongoing success of this industry.

This programme provides you with training in the wide range of disciplines and skills you need for the investigation, prevention and control of aquatic animal diseases. You'll develop an understanding of the biology, husbandry and environment of farmed aquatic species, as well as specialist expertise in aquatic animal diseases.

You'll study at the Institute of Aquaculture, one of the top institutions in this field. It's internationally recognised for both research and teaching and has more than 70 staff and 80 postgraduate students.

You can exit at the end of 9 months with a PgDip Aquatic Veterinary Studies.

Start Date

September

Qualification

Postgraduate Master's

Study Method

Full time

Award Title

MSc

Course Length

1 year

Department

Natural Sciences

Entry Requirements
