This degree is ideal if you're interested in the science behind our health – from our individual health, to global issues such as epidemics or the treatment of people with dementia. It's particularly relevant if you work in a health-related profession, or you're thinking about doing so. You'll study the essential scientific concepts underpinning the function of the human mind and body; the incidence, diagnosis and treatment of disease and disability; and the maintenance and improvement of health in different populations.
