

Supply Chain and Sustainability Management

University of Strathclyde

Content

Supply chain management is widely accepted as a critical business competency. It encompasses procurement of materials, processing and distribution of products and services to customers. In many companies, 80% or more of their turnover is spent outside the organisation and this course helps you become effective in managing this.

The course is aimed particularly at who will work within supply chain management and is suitable for those with a background in support functions such as sales, maintenance, finance and marketing.

These courses allow you to advance your career within the broader area of supply chain management, for example: operations; process management; operations planning & control; purchasing and procurement; and logistics and distribution, amongst others.

You can exit at the end of 9 months with a PgDip Supply Chain and Sustainability Management.
