

Energy, Society and Sustainability

University of Edinburgh

Venues

Central Campus

Content

Often invisible and intangible, energy drives the availability and affordability of all material resources. It is thus key to human development and the heart of any sustainable debate. With the challenges of global climate change, the world is seeking a fast but fair transition to a low carbon society.

The MSC in Energy, Society and Sustainability equips you with an understanding of low carbon technologies, policies and markets with a focus on the analysis of the social, societal, and environmental dimensions of energy transitions.

Through the programme, you can explore the scope and risks, costs and benefits of energy transitions in the face of wider societal processes such as demographics, economic trends and shifting political landscapes.

Start Date

September

Qualification

Postgraduate Master's

Study Method

Full time

Award Title

MSc

Course Length

1 year

Faculty

College of Science and Engineering

Department

Geosciences

Entry Requirements

A UK 2:1 honours degree, or its international equivalent.

A UK 2:2 honours degree, or its international equivalent, with relevant work experience, a strong personal statement and supportive reference may also be considered.
