Central Campus

Content

This programme explores the issues that shape population health and build the knowledge and skills necessary to address them.

Over the course of the last decade global health has received dramatically increased attention, both as an emergent academic discipline and in terms of heightened policy salience.

Global health concerns have become a central component of foreign and security policy and of development and human rights agendas, and have reshaped debates regarding the social impacts of global economic and environmental change.

Finding answers to the key questions confronting global health policy and practice is vital. Through this programme you will explore the issues that shape population health and build the knowledge and skills necessary to address them.

Situated within the Global Public Health Unit, this programme offers innovative research-led teaching that draws on academic expertise from disciplines including public health, political science, social policy, economics, medicine, epidemiology, geography and anthropology.

Start Date

September

Qualification

Postgraduate Master's

Study Method

Full time

Award Title

MSc

Course Length

1 year
