

## Public Health

University of Edinburgh

### Venues

Off Campus

### Content

Public Health is about preventing disease, prolonging life and promoting health through the efforts of society. Whether you are already a working professional in this area, or new to the subject, this Master of Public Health (MPH) is the ideal programme for those wishing to address today's problems in public health.

This MPH programme provides students with an understanding of how different scientific disciplines can be used to investigate and then develop the best professional practice in epidemiology, public health and the social science of health.

The programme is designed to provide an entry point to either the public health profession or public health research for those new to the subject, but also to provide sufficient depth for the benefit of existing public health professionals. The range of elective courses reflects the multidisciplinary nature of the subject.

You can exit at the end of 1 year with PgCert Public Health.

You can exit at the end of 2 years with PgDip Public Health.
