

Environmental Management (Energy, Oil and Gas, Waste or Water)

Glasgow Caledonian University

Content

The overall aim of the MSc Environmental Management (EM) programme is to enable students to develop an environmental specialisation, within the context of their previous qualifications and experience.

With increasing environmental legislation and regulation, commercial and industrial organisations, local authorities and public bodies, all require some environmental input to their activities.

Graduates have gone on to work for employers including local authorities, regulators such as Scottish Environmental Protection Agency (SEPA), and provide research and consultancy for private companies.

The broad scope of the programme is designed to stretch students' educational horizons across traditional subject boundaries, encompassing areas normally associated with engineering, biology, economics, legislation and others.

With pathways in Oil and Gas, Water, Energy, or Waste, students will learn to develop technical and non-technical arguments at an advanced level.

Start Date

September, January

Qualification

Postgraduate Master's

Study Method

Part time (day release)

Award Title

MSc

Course Length

2 years

Faculty

School of Computing, Engineering and Built Environment

Department

Construction and Surveying

Entry Requirements

A 2:2 Honours degree or equivalent in a relevant area. This includes any energy related degree, Environmental Science, Development Planning, Human Settlement Planning, Geology, Environmental Management, Geography, Chemical Engineering, Soil & Water Engineering, Zoology, Electrical Engineering, Civil Engineering, Mechanical Engineering, Petroleum Engineering, Economics.

SCQF Level

11

Address

Cowcaddens Road
Glasgow
Glasgow City
G4 0BA
