

International Mineral Law and Policy

University of Dundee

Venues

City Campus

Content

The minerals industry is changing quickly as environmental and sustainability concerns grow. The industry has a crucial role to play in the energy transition and as a source for components. On this course you will study these changes and understand how the industry previously worked and how it will move towards a sustainable future.

You'll examine the regulatory and contractual environment surrounding the minerals industry. You will learn about how mining rights are granted, the production process, and decommissioning.

The Centre for Energy, Petroleum and Mineral Law and Policy (CEPMLP) is at the heart of these issues and provides the best in advanced education in its field, preparing its graduates to meet the challenges posed by the evolving global economy.

Throughout its history, the CEPMLP has achieved continuous growth and has established international pre-eminence in its core activities: scholarly performance, high level academic research, strategic consultancy and top-quality executive education. Currently, we have over 500 registered postgraduate students from more than 50 countries world-wide.

Start Date

September, January

Qualification

Postgraduate Master's
