

Climate Change Adaptation

University of Strathclyde

Content

This one-year MRes in Climate Change Adaptation aims to provide advanced study in key issues related to climate change and global warming, and how infrastructure will need to adapt.

The course links with the 17 Sustainable Development Goals (SDGs) and in particular the different indicators associated with SDG13 on Climate Action. The course is largely research and project-based but there is also a taught element to it.

This course is designed to cater mainly for graduates with an engineering education, and employees of public and private sector companies who wish to upgrade their skills to be able to tackle the complex issues relating to the current climate crisis, circular economy goals, and the design of engineering options for mitigating environmental impacts and promoting sustainable development.

Start Date

September

Qualification

Postgraduate Master's

Study Method

Full time

Award Title

MRes

Course Length

12 months

Faculty

Faculty of Engineering

Department

Civil and Environmental Engineering

Entry Requirements

A first or upper second-class Honours degree from a UK institution (or overseas equivalent).

SCQF Level

11

Progression Routes
