

Urban Design

University of Strathclyde

Content

Recent data and predictions on the forthcoming rate of urbanisation make cities the most common living environment now and in the future. What kind of life will it be for the seven billion people who will live in existing or developing cities? Cities hold tremendous potential, but at the same time are sources of stress, inequalities and pollution.

In 2015, the United Nations recognised this through the 2030 Agenda for Sustainable Development, which included 17 new Sustainable Development Goals (SDG). Goal 11 is dedicated to urban settlements, with the aim to 'Make Cities Inclusive, Safe, Resilient and Sustainable'.

This means that getting the design of cities right has never been so important. The questions are: what kind of design should we adopt, and who should be in charge? Our course explicitly addresses these questions, and teaches how to design responsive, resilient, sustainable cities for all their inhabitants, thus preparing socially responsible urban design professionals of the future.

You can exit at the end of 9 months with a PgCert.

You can exit at the end of 18 months with a PgDip.

Start Date

September

Qualification

Postgraduate Master's

Study Method

Full time

Award Title

MSc

Course Length

24 months

Faculty

Faculty of Engineering

Department

Architecture

Entry Requirements

An Honours degree in a discipline related to the built environment and the city (such as architecture, planning, engineering, and other built environment disciplines). Candidates with alternative professional experience may also be considered.

The course is open to students with various backgrounds related to the built and natural environment. If you come from design-based disciplines (such as architecture, landscape architecture), please submit a portfolio of design work, to illustrate the range of scales and variety of projects you've been involved in, as well as your graphic skills.

SCQF Level

11

Address

16 Richmond Street
Glasgow
Glasgow City
