

Environmental Sustainability and Geography

University of Dundee

Venues

City Campus

Content

Environmental sustainability is a diverse and dynamic subject examining the interaction between people and their surroundings.

Global warming, biodiversity and renewable energy are just a few of the recurring themes we hear on the news, and public agencies are now looking for graduates with the ability to deliver sustainable outcomes. Businesses, both large and small, are seeking graduates with substantial environmental expertise.

This exciting degree programme means you no longer need to wait until you have graduated to turn your academic interests into practical environmental skills. You can instead draw on two highly-rated disciplines to give you both the management and administrative skills to inform environmental policy and the scientific and technical knowledge to deliver a more sustainable environment.
