

Spatial Planning with Sustainable Urban Design

University of Dundee

Venues

City Campus

Content

This programme is accredited to the Royal Town Planning Institute and provides options for specialisms in Environmental Assessment, Marine Spatial Planning, Sustainable Urban Design and Urban Conservation. Our academic staff have a strong research and practice background in these specialist areas. The programme has strong links with practitioners so our students have the opportunity to engage with 'live' projects as part of their learning.

Semester 1.

Spatial Analysis has two key components. The first component analyses built and natural environments particularly from a conservation perspective. The second part of the module focuses on socio-economic analysis of data at a city scale and the relevance of this to planning.

Statutory Planning. is a practice based approach to learning processes of plan-making and the management of development.

Property Development Processes deals with complexities and challenges in the property development sector and the role of different stakeholders involved.

Semester 2.

Concepts of spatial planning introduces students to the role of planning and planning systems. The other part of this module introduces students to various planning theories and their relevance to practice.

Sustainability in Contemporary Cities examines various challenges facing the growth of cities globally and the implications of these to planning of cities and the countryside.

Semester 3.

A 60 credit dissertation in line with the selected specialism.

Start Date

September, January

Qualification

Postgraduate Master's

Study Method

Part time (day)

Award Title

MSc

Course Length

24 months

Department

School of Social Sciences

Entry Requirements
