

Psychology with Development and Education

Abertay University

Content

Psychology is the scientific study of the most complex machine imaginable: the human mind. This BPS-accredited Psychology with Development and Education degree helps you learn how children and adolescents develop, learn, reason, and socialise, as well as exploring atypical development including neurodivergence.

The first two years of this degree are designed to help you dig deep into the science of psychology, learning the way humans think, feel and behave. In years three and four, you take more advanced options related to your specialist pathway, covering development and education in more depth.

The university's academic experts will give you a deep understanding of developmental and educational psychology, including:

Education and learning; A child's place in society; How children interact with technology; How children develop.

Psychology is both an experimental and observational science. This means you will observe and measure human behaviour, tackle literature research, and develop, test, and evaluate theories. This culminates in conducting your own supervised research project in your final year, which is one of the corner stones of your degree.

Start Date

September

Qualification

Degree

Study Method

Full time

Award Title

BSc Hons

UCAS Code

C820

Course Length

4 years

Faculty

School of Applied Science

Department

Psychology
