## Content

The world is facing the prospect of a climate emergency, with decision-makers grappling with how to understand and respond to the pressures on our environment and society. BA (Hons) Sustainable Development and Archaeology presents you with situations from local to global and from past to present. Inevitable changes to our immediate future will impact on every facet of society, culture and the economy: this is a critical moment to study sustainability.

On this course, you will learn the facts about climate change, explore the UN Sustainable Development Goals, and consider potential and emerging solutions such as the Green New Deals, the concept of 'degrowth' and the transition to wellbeing economies. By looking at long-term perspectives, you will explore how past cultures have adapted to changing climates, successfully and otherwise, and you will be ideally placed to influence or become one of the decision-makers guiding the future of our society.

The degree also focuses on how communities can shape more sustainable forms of development, particularly in rural settings. Most of the teaching team are located in the Western Isles or Northern Isles, where communities are leading the way in community-based development, land reform, community empowerment and community energy projects, which can all contribute to this more sustainable future.

## Start Date

September

## Qualification

Degree

## Study Method

Full time

## Award Title

BA Hons

## UCAS Code

D44A

## Course Length

4 years

## Department

Science, Nature and the Environment

## Entry Requirements

3 Highers at BBC including two relevant subjects.

## SCQF Level

10
