Data Science (Graduate Apprenticeship)

Edinburgh Napier University

Venues

Merchiston Campus

Content

You will develop abilities across the core and emerging areas of data science including statistical techniques, data analytics, data engineering, as well as machine learning and artificial intelligence. You will gain the requisite underpinning technical knowledge combined with key capabilities in data governance and the application of ethics, and well-rounded professional skills and behaviours.

A key part of the Data Science GA is that each of the eight key content areas are combined to deliver a holistic learning experience. These are:

Data Management; Data Analytics; Statistical Techniques; Machine Learning and Artificial Intelligence; Data Engineering; Business Insights Through Data Science; Data Protection and Ethics; Data Science Professional Skills and Behaviours.

As you progress through the course, more of your job role will be used to gain credit towards your final award. This is captured in the Professional Practice modules which allow us to personalise your learning to ensure it meets your needs, those of your employing organisation and the university.

Start Date

September

Qualification
Degree

Study Method

Full time

Award Title

BSc Hons

UCAS Code

TBC

Course Length
