

Oral Health Sciences

University of Edinburgh

Venues

Central Campus

Content

Year 1:

You study general histology, anatomy and physiology, human disease, oral biology and immunology, among other subjects.

During semester 1, you begin to develop your clinical skills in the laboratory and you begin treating patients in semester 2.

Year 2:

Some of the subjects you study include general pathology, pharmacology, periodontal disease, preventive dentistry, behavioural sciences and biomaterial sciences.

You develop your skills in many aspects of clinical treatment, and continue to expand these in the clinical laboratory.

Year 3:

You build on previous courses and, in addition, study oral medicine and pathology, oral surgery and special-care dentistry.

You also undertake a literature review on a subject of your choice. To enter fourth year, you must successfully complete the first three years of the programme.

Year 4:

You develop your clinical skills and undertake a supervised research project.

You have the opportunity to work in other departments and observe clinical procedures in, for example, oral surgery, oral orthopaedics, maxillofacial surgery and implantology.

You are examined theoretically in each of the three main areas of your clinical activity: periodontal therapy, restorative care and paediatric dentistry. These, in addition to your research project, are undertaken for your final examination.

Start Date

September

Qualification

Degree

Study Method

Full time

Award Title

BSc Hons

UCAS Code

A900

Course Length

4 years

Faculty

College of Medicine and Veterinary Medicine

Department

Edinburgh Medical School
