

Forensic Odontology

University of Dundee

Venues

Ninewells Campus

Content

Forensic odontology deals with the examination, handling and presentation of dental evidence for the legal system.

You will develop your knowledge, experience and skills in forensic dentistry, and in aspects of forensic medicine, law and research.

This 2 year course addresses those aspects of forensic odontology which are most frequently the subject of expert testimony in courts and have the most relevance to forensic odontology internationally.

Internationally, there are few opportunities for dentists to gain expertise in forensic odontology in a structured manner from a University with a dental school and an active forensic medicine department.

As a student in Forensic Odontology you will work closely with other postgraduate students in Forensic Medicine, Forensic Science and Forensic Toxicology. You will develop a deep understanding of the role of other forensic disciplines and identify when, where and how forensic odontology links with the wider forensic community. This provides a unique multi-disciplinary nature to the course.

Start Date

September

Qualification

Postgraduate Master's

Study Method

Full time

Award Title

MFOdont

Course Length

24 months

Department

Medicine, Dentistry and Nursing

Entry Requirements

At least 2 years post-qualification dental experience is desirable before applying. This is not a requirement but those with experience will be considered ahead of those who are newly-qualified.
