Progression Routes

Science graduates are well placed to enter a range of both scientific and non-scientific jobs. The study of the sciences develops good analytical and reasoning skills, and you will also have become proficient in using computers. Skills such as these are sought by a wide range of financial, business and public sector employers, so science graduates – particularly those who have good communication and interpersonal skills – are in demand. Two of the compulsory courses are residential/practical courses which allow you to develop the practical skills required for a job in the environmental science field.
