

Global Energy Management

University of Strathclyde

Content

The MSc Global Energy Management is an intensive course aiming to produce future leaders in the energy sector.

The course addresses the complex and increasingly more extreme challenges and uncertainties that industries, economies, governments and societies face. By the end of the programme, you'll be well equipped to understand these and have the knowledge to adapt to this changing context.

You'll learn about the rapid changes within the global energy system. These include escalating demand, constraints on supplies, increasing energy prices, regulatory pressures to reduce carbon emissions, and changing demographics and patterns of energy use and supply.

The course offers excellent opportunities to network with international energy specialists from a range of organisations. We've designed the course to maximise the opportunities for industry engagement. You'll also have the opportunity to take part in events organised by the Energy Institute and the Scottish Oil Club.

Start Date

September
