

Climate Change: Managing the Marine Environment

Heriot-Watt University

Venues

Edinburgh Campus

Content

Large global changes, and climate change in particular, are having significant impacts on the environment. The study of impacts and mitigation/adaptation measures in the marine environment requires a truly interdisciplinary approach. It is essential that scientists, engineers and environmental decision-makers understand the fundamentals of the causes, impacts and management measures involved in dealing with such important issues. The programme specialises in the challenges facing the marine environment and is part of the University's programme of teaching and research in climate change related issues. There are a variety of optional courses available but the core courses are listed below.

You can exit at the end of 9 months with PgDip Climate Change: Managing the Marine Environment.

Start Date

September, January

Qualification

Postgraduate Master's

Study Method

Full time

Award Title

MSc

Course Length

12 months

Faculty

School of Energy, Geoscience, Infrastructure and Society

Department

Energy and Renewables
