

Patent Attorney

Patent attorneys help their clients or employers to secure and protect their patents, and other intellectual property rights. A patent provides an inventor with exclusive rights to the profits from their invention for a limited time.

The Work

You could be:

- using your technical and legal knowledge to check that the invention, design or discovery is original
- drawing up a 'patent draft' (application for patent, including a detailed technical description of the invention) to send to the Patent Office
- applying for a patent to the patent examiner, in the UK and in Europe, and negotiating with them on behalf of the client
- advising clients regarding infringement of patents, briefing lawyers in legal cases and appearing in court as an expert witness
- dealing with the sale or transfer of patents
- keeping up to date with scientific and legal developments relating to inventions
- perhaps specialising in areas such as trade marks, designs, chemistry, mechanical engineering or electronics.

Pay

The figures below are only a guide. Actual pay rates may vary, depending on:

- where you work
- the size of the company or organisation you work for
- the demand for the job.

Generally trainees start around £28,500 to £37,000, rising to £42,000 when partially qualified. This rises to around £68,000 with more qualifications. Newly fully qualified attorneys earn between £65,000 and £73,500. For those with 1-4 years post qualification salaries are between £72,500 and £99,500 and 5 or more years post qualification, £93,500 and above. For partners, salaries can range from £105,000 a year.

Freelance patent attorneys can earn around £50.00 an hour.

There may also be performance related bonuses.

Salaries can depend on the area of expertise.

Conditions

- Your normal working hours would be 9.00am - 5.00pm, Monday to Friday, but you may have to do overtime on occasions in order to meet deadlines.

- You would be based in an office. However, you may have to travel to meet clients, appear in court and visit the UK Intellectual Property Office and the European Patent Office, which may involve spending time away from home.

Getting In

- You need a good Honours degree (often at least 2:1) in science, mathematics, engineering or technology.
- The entry requirements for these degree courses vary depending on the subject and college or university. However, the normal minimum requirements are 4-5 Highers plus subjects at National 5. Maths and science subjects are recommended at Higher.
- The University of Edinburgh offers postgraduate LLM degrees in Intellectual Property Law, and in Innovation, Technology and the Law, on a full time, part time and distance learning basis. A good Honours degree would be required for entry.
- The University of Aberdeen offers the postgraduate LLM in International Intellectual Property and Information Law on a full and part time basis. You would require a 2:1 Honours degree in Law.
- The University of Glasgow offers the postgraduate LLM in Intellectual Property and the Digital Economy. You would require a 2:1 Honours degree in Law or other subject with 50% law content.
- A good reading knowledge of French and German, while not essential for working in the UK, is highly desirable in order to read foreign language documents without having to call for translations. Knowledge of Japanese and Chinese is also becoming increasingly useful.
- A genuine interest in law is helpful.

As this is a small profession entry can be competitive. Patent attorneys work in private practice and patent departments in industry or government. Jobs are advertised on the Chartered Institute of Patent Attorneys (CIPA) website.

What Does It Take

You need to be:

- logical and analytical
- accurate and organised
- able to understand complex technical information
- able to present and argue a case effectively
- able to work well under pressure and meet deadlines
- confident and persuasive.

You need to have:

- good spoken and written communication skills
- a scientific and technical mind
- attention to detail
- discretion and confidentiality skills
- IT skills
- a good memory.

Training

- You would normally start as a trainee patent attorney, and be given legal training in a patent attorney's office or in a company's patent department while studying part time for the examinations of the Chartered Institute of Patent Attorneys (CIPA). Training normally takes four to five years to complete.
- You would then be accepted on to the Register of Patent Attorneys, managed by the Intellectual Property Regulation Board (IPReg).
- If you want to take cases to the European Patent Office (EPO), you must also pass the European qualifying examination.

Getting On

- Patent attorneys may choose to specialise in particular types of patents.
- You may move in to trade mark work as a trade mark attorney.
- Some experienced patent attorneys become partners in their firms or the head of a patents department in a company. Others may become patent examiners with the UK Intellectual Property Office.
- Since this is a small profession it would be an advantage if you are willing to move around the UK for advancement.
- Other patent attorneys become self-employed, either by taking on freelance work or by setting up their own patent agency.
- There may be opportunities to work abroad.
